

# Introduction to MapAlarm

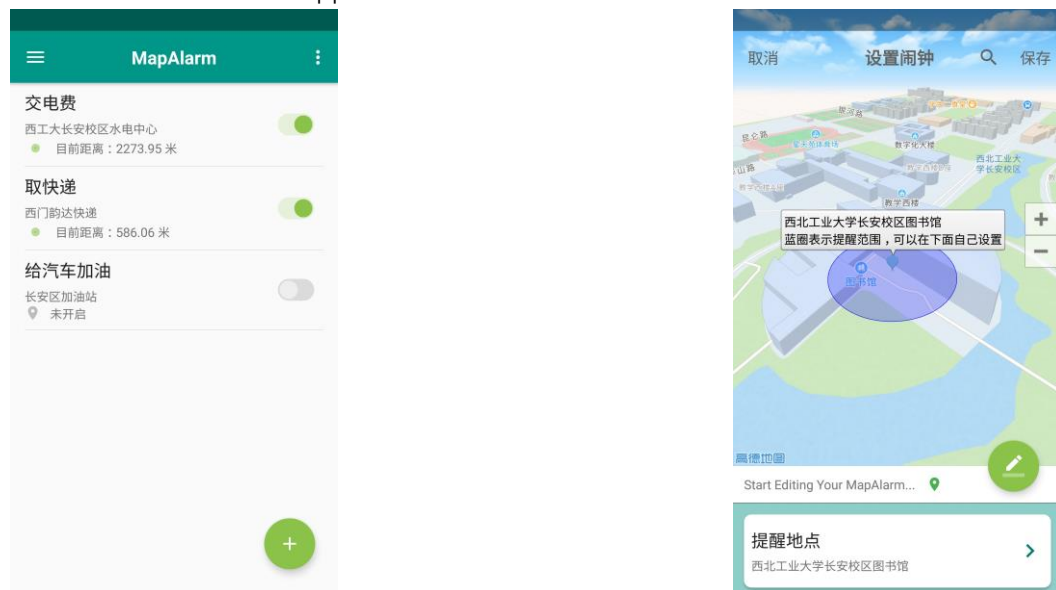

## 1. About the team

This app is initially developed by Yitian Chen, Wenhui Hu, Hongluo Chen, and it is the top 50 popular apps in HuaWei 2017 Developer Contest in China. And since the contest has already over, we make this project open-source. Anyone can download it and continue to develop it or use it as a tutorial.

## 2. About MapAlarm

MapAlarm is an android studio project, and an alarm clock which is based on your location. It means you can set a certain location and a certain range. When the app detects you are near the location within the certain range, it will push a notification to remind you to do something.

Some screenshot of the app:

## 3. Something to remind you if you want to contribute this project:

- 1) The background Location uses the API by GAODE(高德), not Google Maps. And GAODE Location API does not work outside of China.
- 2) The directory struct we upload is the struct of the Android Studio 2.0, it may not be work if you use other IDEs or other versions of Android Studio.
- 3) Other questions you can just leave me a message in github,
